

# Depth of the Mohorovicic discontinuity

Authors: R. Aizberg <sup>\*1</sup>, R.G. Garetsky <sup>\*1</sup>, A.K. Karataev <sup>\*2</sup>; G.Schwab <sup>†\*3</sup>

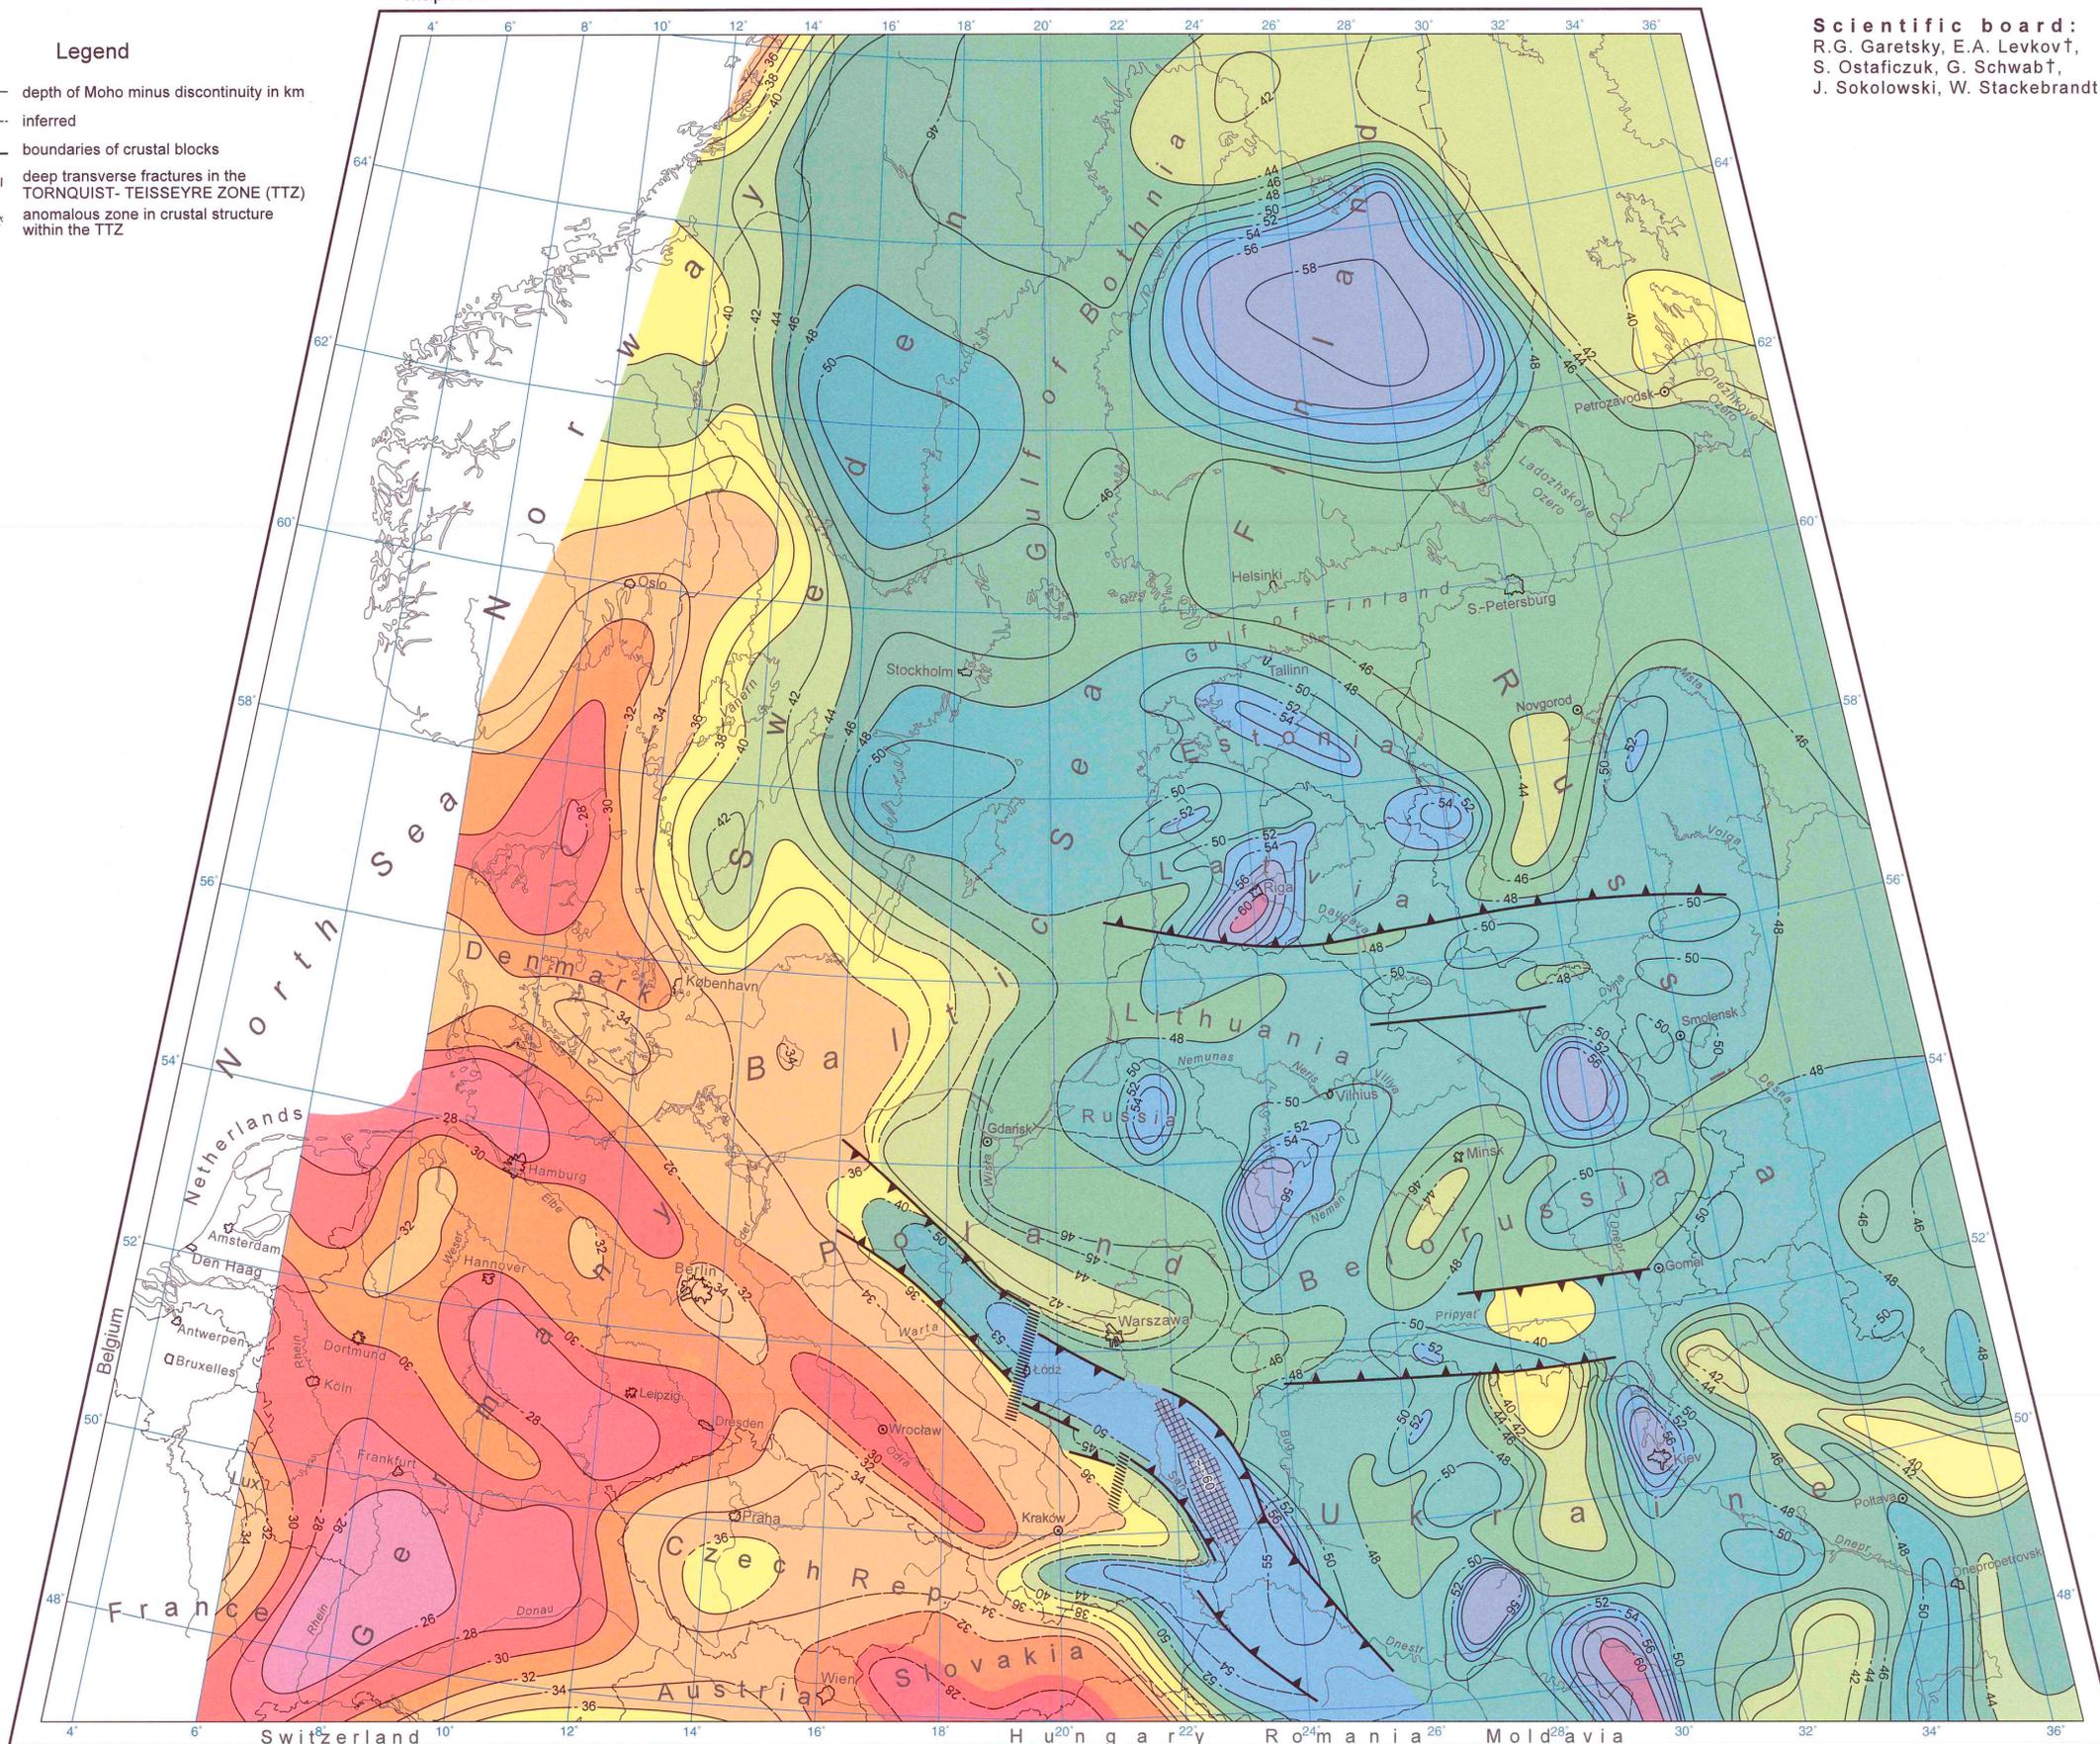

**NEOGODYNAMICA BALTICA**  
Projekt No.346

**Scientific board:**  
R.G. Garetsky, E.A. Levkov <sup>†</sup>,  
S. Ostaficzuk, G. Schwab <sup>†</sup>,  
J. Sokolowski, W. Stackebrandt

Map No.7

## Legend

- 30— depth of Moho minus discontinuity in km
- inferred
- boundaries of crustal blocks
- deep transverse fractures in the TORNQUIST- TEISSEYRE ZONE (TTZ)
- anomalous zone in crustal structure within the TTZ

Topography: D. Mehla, J.-U. Schmidt and E. Volkman,  
using topographic maps of  
Europe 1: 1.500.000

Cartography: D. Mehla

Scale 1: 5.000.000

Institutions: <sup>\*1</sup> : Inst. Geol. Sc. NASB, Minsk;  
<sup>\*2</sup> : MSU, Moscow;  
<sup>\*3</sup> : Geological Survey of Brandenburg, Kleinmachnow

Authors using: A. Chekunov, V. Sollogub, T. Ichenko et al. (1986-1994, unpublished) for Ukraine;  
A. Guterch (1994, unpublished) for Poland;  
P. Giese & H. Bunes (1992, EGT monography) for the western part;  
E. Hurtig et al. (1991, Geothermal Atlas of Europe) for the northeastern part;  
G. Karataev et al. (1994, monography) for the eastern part;
